

## Gate Arm Tip Sections

NEG 504-SL

NEG 504-TP

National Electric Gate has realized a usage for a short tip section that is flexible in use and can be used to fit in the second or third sections of the crossing gate arm in usage today.

This section allows the crossing gate arm to remain in place if a car or truck illegally passes a crossing gate arm in a down position. This section then returns to its original position.

We use a copolymer that is excellent in extreme cold and hot conditions that might occur outdoors.
